

PEGS

Cushion Locater

*"To err is human...
...to eliminate the possibility is
therefore a good idea."*

The PEGS System ensures that each seat has its correct size cushion and, equally important for comfort, that every cushion is always in the correct position on the aircraft. It does this simply by making it impossible to get it wrong.

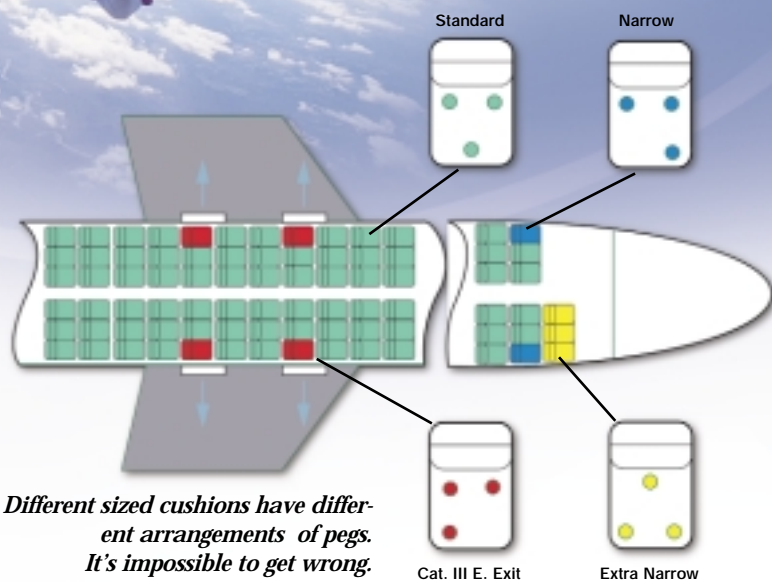

It's not always easy to see the difference but the bottom cushions for seats come in different widths and depths: standard, narrow, extra narrow and Emergency Exit seats. When refitting them, regrettably, it's easy to get it wrong. Bottom cushions that are badly fitted or on the wrong sized seat are not only uncomfortable and increase health risks, they also jeopardize safety compliance.

The PEGS System makes sure it's right.

Simple but ingenious.

*Colour coded pegs go in matching colour holes.
It's easy to get right.*

*Different sized cushions have different arrangements of pegs.
It's impossible to get wrong.*

DAX™

Graphite Foam

The original graphite foam from the inventors of the product, DAX™ graphite foam offers you:

- Full flammability compliance when using SoftLine or Extrême Style Covers
- Fully compatible with the PEGS system.
- Potential weight saving of over 30% with DAX™ Lite.
- Ongoing flammability compliance with no secondary liner
- 4 year warranty
- Full CAA design approval for new build or retrofit
